

Drag Slat Conveyors

**Conveyors, drag slats, or bucket elevators...
any length, size, or capacity.**

Stansteel builds every type of drag slat conveyor and bucket elevator with capacities up to 900 tons per hour. A wide selection of options gives you the best choice in job-matched chains, bearings, slats, buckets, and wear plates. Stansteel also rebuilds and resizes used conveyors. We stock nearly every component for any drag slat conveyor or bucket elevator ever built. We build every type and size of conveyor, from small bintop and under plant slide out conveyors to conveyors stretching 112 feet.

Our drag slat conveyors are custom designed to your requirements. They can include chrome carbide or Everlast ceramic wear plate, roller bearing chain, oil or electric heated bottoms, reinforced slats and sprockets, and other heavy duty components. Pre-assembled chain and slats can be retrofitted to increase the capacity and service life of the conveyor. Regardless of new, used or reconditioned conveyor, we can upgrade it to longer wear life chrome carbide, Everlast or Ni-Hard.

We Make Your Plant Run Better.
