

Drums and Dryers

We can custom build a drum mixer, a dryer or a replacement shell to any specification. Just purchased a used plant? We can create a dryer or drum to fit your existing frame.

In conjunction with our affiliate companies Louisville Dryer Company, Vulcan Ironworks, and Industrial Kiln & Dryer, Stansteel has built over 5,000 rotary heating, drying, cooling and mixing devices in over the last 100+ years. It is without question one of the most critical and important pieces of machinery on any hotmix asphalt plant.

In evaluating the specific customer requirements, whether it's on a high production counterflow drum mixer, a batch plant or a rotary device that is attached to some other equipment, it is mandatory that a number of factors have to be taken into consideration for the proper engineering design, the application know-how, and the precision fabrication of both the internals and the externals.

We Make Your Plant Run Better.
