

Silos

We give you the world's most complete selection, offering incredible values in new equipment or upgrades for your old equipment to perform like new.

Get matchless value on any type and size silo...from a 100 ton portable or a small surge unit, to multiple silo systems up to 350 tons each. We also offer new and reconditioned drag slat conveyors, silos, batchers and auxiliary conveyors.

Need additional capacity? Stansteel has a proven track record of custom engineering new silos to be retrofitted alongside existing silos. The additions are often indistinguishable in appearance from existing silos, the difference being the superior design and engineering that went into the creation of the new high efficiency silo. In the event that an existing silo system requires additional capacity, Hotmix Parts/Stansteel will measure the silo, survey it for structural integrity and make specified additions.

We Make Your Plant Run Better.
